Signed by Individual hiring the equipment..... Date/.... / 010

Witnessed by representative of Seven Mile Inn..... Date/.... /010

(IN CASE OF DAMAGE NON RETURN THIS CARD WILL BE CHARGED)

CREDIT CARD # expiry 3 digit code

Tips for trouble free draught beer.

- *Pick up the keg close to the starting time of your party, otherwise the keg will heat up in the ambient air temperature & become heady.*
- *Set the keg up in a shady, cool area out of the wind.*
- *Keep the chiller box full of ice & a little water just covering the metal manifold in the bottom of the esky.*
- *Wrap the keg in a damp beach towel to assist in keeping it cool.*
- *Don't let anyone fiddle with the gas pressure, the pressure is set at 200 Kpa when it leaves the Tavern & if the gauges & tap have not been bumped in transit, all will be OK, all you are required to do is turn on the top tap of the gas bottle like turning on your BBQ gas bottle. I can't emphasize **DO NOT ADJUST THE TAP IN FRONT OF THE GAS GAUGES< THIS IS WHERE 99% OF ALL HIRE KEG PROBLEMS ARISE.** Should the gas pressure gauge read below 180 Kpa, ring the tavern on 9440 0099 & someone will talk you thru it. If you require us to visit the venue to correct a problem that is cause by someone fiddling with the pressure a \$40 charge will apply.*
- *When pouring beer, turn the tap on quickly and fully. Opening the tap slowly will cause your beer to be squirted & heady, kind of like putting your finger over the end of a garden hose.*

To Connect your keg

- *Fill the chiller box with ice, put the drainage plug in, add a little water to just cover the metal manifold at the base of the chiller box.*
- *Place the keg coupler on the keg (Red handled coupler slides on, Black or Blue handle couplers screw on. Next engage the handle of the coupler by pulling it back slightly, depressing the handle, then push it forward slightly until it clips into the downward engaged position.*
- *The coupling connectors work like garden hose fittings, slide the collar back, plug in the lead, let go of the collar, it will return to its original position & hold the lead in place.*
- *Remember, the lead to the Chiller Box connects into the top of the coupling and the lead from the gas bottle clips into the side of the coupling, now turn on gas bottle using the tap on the top of the gas bottle, just like your BBQ bottle.*
